About Us

Pawan Jajoo (Founder & CEO), Gilbert Martinez (Co-Founder), and Elizabeth "Betsy" Goodfriend (Investor Relations) are all juniors at Carnegie Vanguard High School in Houston, TX. We came up with the idea of an anti-cheating calculator app at the beginning of our sophomore year, when we were spending hundreds of dollars to satisfy school supply requirements that called for, at a minimum, a TI-84 graphing calculator, a separate scientific calculator, and an additional four-function calculator. It took us a year's worth of crowdfunding, presentations to investors, and coordination with Houston-area business, legal, and app development experts to raise enough money to create and form our very own Limited-Liability Company and file for a provisional utility and design patent. Today, we are proud to present to you a product capable of revolutionizing the education technology industry. And it all starts with you.

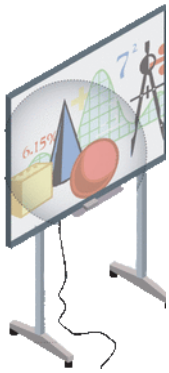
All About the App

Press Release

"Introducing the world's first (and finest) anti-cheating calculator. Crafted with simplicity in mind, Graphr has a variety of themes and exquisite, virtual architecture for you to choose from. It's completely weightless, and designed to fit in your pocket so well, you won't even know it's there. Timeless, so that you're always ahead of the curve. Priceless, in that it features all the functionality of the TI-89 at just one-fifth the cost. The Graphr App is even integrated into the Cloud to empower students and educators alike with cutting-edge technology such as Instant Grading, Real-Time Learning Analytics, Test Mode and even curated calculator menus."

Features

Outside of our patent-pending "Test Mode," Graphr can be used offline like any other multi-function calculator app. Test Mode is activated as soon as a student enters his or her unique ID and enters a valid classroom code. This, of course, requires Internet connection via school Wifi or a cellular data network in order to make use of our secure, Cloud server. The teacher then receives text alerts and notifications if the app detects it is not the primary application running on the student's device at any time during the preset testing period. In this way, students are not locked out of their device in case of an emergency, and disciplinary measures (if any) remain at the discretion of the virtual classroom's administrator.



Test Mode also allows teachers to curate certain functionalities of our multi-function calculator based on the testing material. For example, if a quiz or test is trying to assess a student's ability to graph, teachers can restrict their classroom to a certain type of calculator for the duration of the exam using their administrative login privileges. Teachers can even create entire exams and answer keys from our Desktop or Mobile interfaces, and assign a particular type of calculator to each question. This is useful if an exam is testing multiple skills at the same time (i.e. graphing and solving matrices). Traditionally, that problem would have been

solved by taking the test in separate segments and requiring students to purchase two or three different types of calculators, wasting both time and money for everyone involved.

Students and teachers alike find that mathematical process is cumbersome to write out, and even more cumbersome to make sense of and grade. That's why Graphr's Test Mode feature offers to log and organize each student's calculator input and logic in an easy-to-read, digital text file format. If the exam and answer key are hosted on our interface, the app can even grade final answers for accuracy, awaiting the teacher's independent assessment of the student's process and critical thinking skills. Thus, Graphr can help teachers identify top concerns and achievements related to their students.

The Graphr App is coming soon to Google Play and the Apple App Store. It will be compatible with Android 4.1 or later, and on iOS 7 and 8. Teachers will be able to manage their classroom(s) via the mobile app or on the Web at www.classrooms.graphrapp.com, but students will be limited to compatible smartphones or tablets (personal or otherwise). It is important to note that the final version of the app will include optional in-app purchases at the discretion of the individual who owns the device. Since an individual would need to login to their Google or Apple account to pay, the school and / or district will not incur charges for these purchases. Team Graphr will never place ads on our app or our website. For more information regarding our online practices and policies, please make sure to visit our website at www.graphrapp.com and take a look at our Privacy Policy and Internet Safety Guide. We reserve the right to update these documents at any time without notification or consent.

What does being a Launch Partner entail?

In coordination with our international development team, we would love to test a primitive version of our final release among your students and staff, who we feel could provide valuable qualitative and quantitative feedback and help shape the final version of our app. Afterwards, we would love to provide your students and staff the opportunity to use the fully-functioning app at no charge, so that we can point to our success at your location before expanding to more and more schools and even school districts. We recognize the emphasis your school places on STEM curriculum, not to mention the exemplary academic accomplishments and standards of your students, so we would love to have your family join ours. Here is a tentative timeline for the aforementioned goals:

- **Design Survey** from November 16th – 24th, 2015
    - Students and staff complete a quick, 5-minute survey regarding the design and layout of our app and each calculator interface. They also answer questions regarding their access to mobile technology in and out of school.
- **Hack-a-Thon** from November 30th – December 14th, 2015
    - Students and staff have the opportunity to receive a gift card if they can successfully bypass our anti-cheating algorithm(s) and detail the methodology behind the "hack." We anticipate interest in this to be limited to technically-oriented students in extracurricular activities like Robotics or advanced computer science classes. This event will help us close loopholes in the Test Mode technology before final app release.
- **Teacher Training** between January 5th – 22nd, 2016
    - Depending on your faculty and staff's availability, we would like to help them understand the inner workings of our mobile and Web interfaces, and walk them through applying Test Mode to their curriculums.
- **BETA App Launch** beginning around January 25th, 2016
    - Classes begin using the app at teacher discretion, under no school-wide contract or obligation. Graphr will be complimentary for the entirety of the 2015-2016 school year's spring semester for our launch partners.
